

Searching the Documentation DVD

Help for searching the DVD faster

All files on this DVD can be searched in one operation in Adobe Acrobat. To search all files takes quite a long time, but you can create an index to make it faster to search the next time. How to set up an index is described in Adobe Acrobat Help (press F1 in Acrobat).

Searching the DVD

Use this procedure to search all files on the DVD.

1. Start Adobe Acrobat Reader, or Adobe Acrobat Professional.
2. On the **Edit** menu click **Search**, or press CTRL + SHIFT + F.
Note!
There are two search functions in Acrobat. Use **Search** because the **Find** function can only search in the currently open document.
3. In the **Search** window, type a word or a phrase to search for.
4. Click **Use Advanced Search Options**.
5. In the **Look In** list, select your DVD drive.
If you have created an index you can select it in this step.
6. Add additional search criteria if needed.
Additional search criteria can for example be specific languages, using the language codes. See *Language codes in file names* below.
7. Click **Search**.
The result is listed as a tree view. Expand and collapse the documents to find the exact locations in each document.

Tip!

To search only in files of a specific language, use the additional search criteria and search for files with filenames containing the specific language code. See *Language codes in file names*.

Language codes in file names

Language code	Language
en	English
sv	Swedish
de	German
fr	French
es	Spanish
pt	Portuguese
it	Italian
da	Danish
nl	Dutch
zh or zh-cn	Chinese (simplified)
ko	Korean
ja	Japanese
fi	Finnish
cz or cs	Czech
ru	Russian
pl	Polish
hu	Hungarian
tr	Turkish
